PREFERRED JOB

Senior Front-End Developer

SKILLS

Technical skills

- Four years of experience in Front-End development: JavaScript (native Object Oriented JavaScript, Angular.js, jQuery), HTML (HTML5), CSS (CSS3, SaSS).
- Expert in structuring the Front-End of large and scalable applications (both regular and Single Page applications): modular, optimal, fast Object Oriented JavaScript; scoped, clean and reusable CSS using SaSS language; clean and declarative HTML, compatible with XHTML and HTML5 standards.
- Deep knowledge of the inner structure of Angular.js: best practices, modularity, optimization, edge corners of the framework.
- Expert in handling videos and other media in the Front-End (both HTML5 and JWPlayer APIs).
- I write Front-End with a Behaviour and Test Driven approach (BDD, TDD); my JavaScript is testable with both unit and integration tests (I usually write tests in Jasmine).
- Expert in smooth and creative animations (both jQueryUI and CSS3 animations); I wrote my own plugins in native JavaScript to generate CSS3 animations (<https://github.com/adrdilauro/tradewind.js>).
- Expert in responsive multi-device CSS, and well structured media queries.
- Expert in problems of cross browser compatibility, down until IE8.
- Knowledge of the browser's ecosystem (DOM and CSSOM compilation and rendering, optimization of resources rendering and PLT).
- I have worked with professional web designers (developing Front-End based on exact mock ups in Photoshop), and have myself an eye for design; I often propose original solutions for UI: my constant worry is providing a user interface which is in the same time clear and captivating.
- Expert in structuring scalable localized Front-End; I am aware of Front-End related problems of supporting multiple languages, especially those using ideograms, like Chinese.
- Creation and manipulation of precise svg icons (configuring viewBox and other properties in order to make it web and CSS friendly).
- Experience with JavaScript libraries such as Underscore.js.
- Good knowledge of Bootstrap and other style libraries / plugins.
- Expert in writing comprehensive QA processes.
- Four years of experience in Ruby on Rails (Ruby 1.8, Ruby 1.9, Ruby 2, Rails 3, Rails 4); experiences using ActiveRecord and ActiveRecord over a preexisting API written in another language.
- Three years of experience in relational databases: three years with PostgreSQL, one with MySQL; query optimization, database design, databases with 5'000+ active users; experience in migration of data from a database MySQL to a database in PostgreSQL.
- Indirect knowledge of Back-End problems related to videos (ffmpeg, different products depending on the device, different durations, clipping, transcoding times): I have a long experience in developing Front-End that handles video, so I know what kind of problems one can expect in the Back-End.
- Experiences as a full-stack developer; MVC and REST.
- Four years of experience with Back-End unit tests (mainly RSpec).
- Experience in the gaming industry (also in designing games' logic).
- Experience in education and tools for e-learning (Moodle, SCORM and TinCan standards).
- Interaction of web applications with social networks (Facebook API, Twitter).
- Version management systems: Git.
- Project management systems: GitHub, Jira, RedMine.
- Knowledge of Java and C, acquired in projects for university.

Organisational skills

- Passion for scalable, clean and maintainable code.
- Behaviour Driven and Test Driven development (BDD, TDD).
- Best practices for team programming: working on separate branches, code reviews, unity of code style, coordination with other members of the team (both physically and in remote).
- User-focused, UI-focused; I try always original solutions, I have an eye for web design too.
- Agile methodologies.
- Punctuality, precision, passion for quality and interest in any small detail.
- Problem solving.
- Global vision of the software's logic.
- Organization of work: natural skills in task optimization.
- Natural leadership skills.
- I like difficult challenges and working under stress.

WORK EXPERIENCE

Oct 14–Present

Senior Front-End Developer

IRIS Connect

Sovereign House, Church Street, Brighton (United Kingdom)

- Responsible for the Front-End of the company's application; use of Angular.js, native Object Oriented JavaScript, CSS3, HTML5, jwPlayer API, Jasmine testing, jQuery.
- Responsible for organizing optimal JavaScript, HTML and CSS at a large scale.
- Expertise in Angular.js, deep knowledge of its inner mechanisms.
- Expertise in CSS3 animations.
- Development of an interface for video editing using Angular, CSS3, jwPlayer API, tools for live recording.
- Experience with responsive multi-device CSS (for both mobile and desktop devices). I participate in decisions about UI and design.
- Coordination of QA of the Front-End, responsible for writing QA processes.
- Development new features (using Ruby and ActiveRecord over an API of a backend written in Haskell) on the company's application.

Business or sector Education, continuing professional development (CPD)

Jul 12–Apr 14

Junior Front-End Developer

Morgan S.P.A.

Via degli Olmetti 36, Formello (Rome) (Italy)

- Development of high quality front-end for single page applications; use of native Object Oriented JavaScript, JQuery, JQueryUI (and several graphic libraries), HTML5, CSS3.
- Expertise in the media interface of HTML5: development of single page applications for editing video, audio and images.
- Responsible for organizing optimal, scalable and modular JavaScript, HTML and CSS.
- Worked together with professional graphic designers, participated (with original solutions) in decisions about UI and design. Experience with CSS responsive for both mobile and desktop devices.
- Development and maintenance of a scalable Front-End structure for an application localized in English, Italian and Chinese.
- Worked on QA and optimization of the speed of the Front-End.
- Worked on parts of the company's application's Back-End: used Ruby on Rails (Ruby 1.9, Ruby 2, Rails 3, Rails 4); database design (PostgreSQL), unit testing (both RSpec and the native test platform of Rails 3), optimization of SQL queries.
- Back-end integration of image editing, uploading and downloading files, sending emails, composition of zip packages (in Ruby).
- Development of scripts to create SCORM packages (in Ruby).
- Maintenance, bug fixing and refactoring of existing web applications.

Business or sector Information and communication, education

Mar 11–Jun 12

Junior Full-Stack Developer

Maypun Soluciones Informáticas
avenida Jujuy 2048, Capital Federal, Buenos Aires (Argentina)

- Design and development of a game of football forecasts (web application on Facebook), using Ruby on Rails (Ruby 1.9, Rails 3).
- Development of the game's front end using JavaScript (both native and JQuery), HTML5, CSS3.
- Design of a database with 40+ tables (PostgreSQL), optimization of queries and development of automatic processes dealing with high numbers of data (the game had 50'000 users in the database, of which about 6'000 active players).
- Development and maintenance of automatic tests for the whole application.
- Designed automatic processes interacting with Facebook and Twitter (publish on the wall, read posts and comments and process them) and with streams of external data (live update of football games).
- Responsibility of security and consistence of the game's logic; participation in most of the decisions about the players' experience.
- Migration of a database containing several thousands of users (and hundreds of thousands of other data such as games and forecasts) from a database in MySQL to a database with a different table structure in PostgreSQL.

Business or sector Entertainment, gaming

EDUCATION AND TRAINING

Sep 07–Oct 10	Master in Mathematics, specialization in Theoretical Computer Science EQF level 7 Università degli Studi Roma TRe via Ostiense 159, 00154 Rome (Italy) www.uniroma3.it Thesis (in Bioinformatics): "Gene Regulatory Networks: extracting models from formal specifications" Final grade: 110/110 magna cum laude Fields of specialization: Stochastic Algorithms, Information Theory, Computational Algebra, Bioinformatics, Process Algebras, Lambda Calculus, Polynomial Dynamical Systems
Sep 04–Jul 07	Bachelor in Mathematics EQF level 6 Università degli Studi Roma Tre via Ostiense 159, 00154 Rome (Italy) www.uniroma3.it Thesis (in Algebraic Topology): "Orientation and orientability of topologic manifolds" Final grade: 110/110 magna cum laude Fields of specialization: Commutative Algebra, Topology, Differential Geometry, Group Theory
Sep 99–Jun 04	High School Diploma (Humanitarian and Classical Studies) EQF level 5 Liceo Classico Statale Augusto, Rome (Italy) Final grade: 94/100

LANGUAGES

Courses and conferences

- Gained a scholarship for being the first in the admission test of my faculty (Sep - 04)
- EJCIM08, École Jeunes Chercheures en Informatique Mathématique, Université de Luminy, Marseille (Apr - 08)
- RubyConf Buenos Aires 2011 (Nov - 11)
- RubyConf Bath 2015 (Mar - 15)
- RubyConf Brighton 2015 (Jul - 15)
